Description With the rollout of vaccines against COVID-19, an optimistic and a negative attitude among people have arisen. Surprisingly, surveys among people reveal that there is a significant rate of distrust against the vaccines. In a recent short report published in this journal, vaccine hesitancy was found out among medical students. Hence, wide array of research has been springing, recommending various approaches in assisting authorities deal with vaccine hesitancy such as proper and effective strategic communication as a solution. This study suggests however that a more 'localized' public education and role-modelling from public officials and health authorities can help a lot in building public trust. The study aims to contribute to the further development of public health mechanisms in the rolling-out and distribution of vaccines against COVID-19.

Description In a recent correspondence, vaccine hesitancy and its pressing issue in possible delaying of being triumphant in the pandemic was discussed. This paper highlights vaccine nationalism as a predicament that would not just delay but worsen the present situation of the pandemic. This study suggests a global response among countries that people must see the world as a global village and as one community it must save collectively.

Publisher Oxford University Press

Description The holiday season, Christmas to New Year, is the most festive period of each year in the Philippines. However, the beginning of the festive holiday season in the Philippines seems to be a predicament to healthcare workers and professionals especially during this coronavirus disease 2019 (COVID-19) pandemic. The holiday season is considered a health risk in the Philippines because of the change of lifestyle leading to the increased number of health consultancies and hospitalization. Thus, the expected surge of people in the hospitals and clinics pose an added stress to healthcare workers and professionals. Pre-Holiday policies and programs are therefore essentials especially during the course of battling COVID-19.
